

## EDUCATIONAL EXCURSION TO GRUNAU DESALINATION PLANT

We **visited** the **Desalination Water Plant** located here in **Grunau**, few meters away from the school.

As planned with the supervisor Miss Pauline from Karasburg, we went on Monday – **27.09.2021** with the targeted grade 6 class accompanied by all the teachers after school.

Our **Grade 6 learners** were chosen to attend the visit to the plant because they were doing the following Natural Science and Health Education topic/ theme with their science teacher:

- ✦ **Topic** – Water
- ✦ **Theme** – Importance of sufficient clean water
- ✦ **Competency** – Discuss the scarcity of clean water could lead to health problems of the eyes, skin and scalp

The **teachers** accompanied the **learners** going to the site of the plant by **foot**. We were cheered by the **Engineer at the site Mr. Jason Lugambo** which took us through during the visit. He touched on the following points:

- ✦ Where the water comes from
- ✦ Process of water cleaning
- ✦ Testing water, good for human use
- ✦ Importance of clean water

Our visit was successful and educative. Learners at the end gave a vote of thanks to everyone. We dismissed the learners soon after we reached the school. **See attached photos for your perusal.**

MOTTO

**“GO WIDE GO WILD WITH LEARNERS”**
